~~~~~

**Lowland Rhododendron Farm** is a tract of one hundred and fifty acres which produced Rhododendron maximum in such profusion that the locality became famous for its rhododendrons long before any attempt was made to propagate and distribute them.

During the last ten years we have been developing this natural stock by thinning out, cutting back, transplanting and propagating by the usual methods right in the natural environment.

**Shipping** with a railroad siding on the farm, we are able to load stock promptly without drying.

**Grades of Stock.** For the convenience of customers with different requirements stock is furnished in three grades.
